

...as much as 2-4% of your annual supply spend.

How can your hospital fulfill its healthcare mission and remain healthy financially? The answer lies in the supply chain, which typically accounts for 25-30 percent of a hospital's operating budget. ERP/MMIS initiatives can help cut supply chain costs by automating processes and increasing procurement efficiencies. But real savings lie at a deeper level.

Clean Data is the Key

Information systems are only as good as the data within them. While many hospitals have upgraded or deployed ERP/MMIS systems in recent years, few have confronted the problem of out-of-date data. Over time, aging master data becomes toxic to the business, adversely affecting every link in the supply chain.

Fuel Your Supply Chain Cost Reduction Efforts

Neoforma Data Management Solution™ (Neoforma DMS) restores product, vendor and contract data, transforming disparate data applications into powerful savings opportunities by:

- **Cleaning supply chain data and reducing processing errors**
- **Enriching data with standardized descriptions and UNSPSC categorization**
- **Increasing control over supplies purchased and ability to analyze spend over time**
- **Empowering you with reports to optimize your supply budget**

The Decision is Easy

As the executive responsible for your hospital's supply chain spending, you're called upon to make hard decisions. Instituting a data management solution should be one of the easy ones.

Neoforma DMS enables you to:

- **Make confident spend decisions**
- **Identify savings opportunities**
- **Drive data accuracy and integrity**
- **Optimize your resources**

Get a FREE Data Assessment and Find Your Missed Savings

In just a ten-minute conversation, we can determine if your hospital would benefit from a free data assessment. We'll find out:

- **If the accuracy of your item master data stacks up against industry best practices**
- **If you have rampant price inconsistencies within your ordering history**
- **If your supply spend analysis and decision making is as effective as it ought to be**

**To learn how you could save 2-4%
of your total annual supply spend,
